## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9 and 36-39, drawn to a method of operating a fuel reformer.

Group II, claim(s) 10-17, drawn to a method of startup up a fuel reformer.

Group III, claim(s) 18-21, drawn to a reformer.

Group IV, claim(s) 22-30, drawn to reformer and fuel injector.

Group V, claim(s) 31-35, drawn to on-demand fuel reforming system.

Group VI, claim(s) 40-47, drawn to a fluid processing device.

Group VII, claim(s) 48, drawn to a fluid processing device.

2. The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

**Group I** contains a fuel reformer which is operated in such a way that the mass flow of combustion gasses during startup is five times that during normal operations. This feature is not contained in any of the other groups.

**Group II** contains a fuel reformer which is operated in such away that the internal temperature of channels is raised to an elevated temperature in less than about 30 seconds. This feature is not contained in any of the other groups.

**Group III** contains a panel steam reformer which has a length and width which is greater than the distance between faces of the steam reformer. This feature is not contained in any of the other groups.

**Group IV** contains a vaporizer and fuel injector between the vaporizer and reformer. This feature is not contained in any of the other groups.

Art Unit: 1795

**Group V** contains a steam reformer and vaporizer in which each include a multiplicity of flow paths between a pair of faces. This feature is not contained in any of the other groups.

**Group VI** contains a stack of thin sheets which has header openings wherein the aligned header openings are high aspect ratio in shape and the cumulative cross sectional area of the flow in an entrance region to one of the first microchannel flow path paths is within about 20% or 50% of the cross sectional area of the flow in the first flow path a substantial distance removed from the entrance region. This feature is not contained in any of the other groups.

**Group VII** contains wherein outlets of the first flow paths are interleaved with outlets of the second flow paths such that the first and second fluids mix upon exiting their respective flow paths. This feature is not contained in any of the other groups.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
